

Vector Software Integrates with Keil for Automated Test Capability

North Kingstown, RI – November 15, 2007 - Vector Software, Inc., a world leader in the embedded software test tool market, today announced the integration of their VectorCAST test tool with the Keil compiler environment. The joint offering will provide developers using the Keil environment with an automated unit and integration test capability allowing faster time to market with lower cost and better reliability.

Vector Software's VectorCAST™ is a world-class integrated software test solution that automates the tasks associated with testing software components for C/C++, Embedded C++, and Ada83/Ada95 programs. Automation includes: complete test harness construction (stubs and drivers), test generation, test execution, code coverage analysis, regression testing and static measures for code complexity, basis path analysis, and coding standards enforcement. VectorCAST enables companies to significantly reduce the time, effort and cost to validate safety, mission, and business-critical systems.

"Partnering with Vector Software expands our services in the safety critical markets, making the task of testing applications in those key industries easier," said Mark Onions, Product Manager from Keil. "The addition of VectorCAST™ to the popular Keil compiler environment offers developers an unmatched level of testing productivity."

"At Vector Software, we are committed to delivering the industry-leading verification tools that developers of embedded software applications need," said Bill McCaffrey, director of marketing at Vector Software. "This integration of VectorCAST™ with the Keil compiler environment further illustrates the importance that both the companies place on developing and testing safety critical applications."

About Keil

Keil™, an ARM® Company, makes C compilers, macro assemblers, real-time kernels, debuggers, simulators, integrated environments, evaluation boards, and emulators for ARM7/ARM9/Cortex-M3, XC16x/C16x/ST10, 251, and 8051 MCU families.

About Vector Software

Vector Software, Inc, is a leading independent provider of automated software testing tools. Vector Software's VectorCAST line of products reduces the burden placed on individual developers by automating and standardizing application-component testing. The VectorCAST tools support the C, C++, Ada83, and Ada95 programming languages.

The market focus of Vector Software is on companies developing embedded systems for aerospace, military, medical, telecom, and process-control applications.
